Index at acceptance:—Class 132(ii), H2b.

COMPLETE SPECIFICATION.

Improvements relating to playing cards

I, ANTONIO MIGLIARESE, of Via Camperio, 10, Milan, Italy, an Italian subject, do hereby declare the invention for which I pray that a patent may be granted to me and the method by which it is to be performed, to be particularly described in and by the following statement:—

It is the object of the present invention to provide playing-cards of plastic material, wherein on one face of a cutting of a sheet of white plastic there is printed the picture and with its other face the said cutting is fastened onto a corresponding cutting which too is of plastic but coloured and opaque, destined to serve as a support.

In the accompanying drawing there is represented the "Three of diamonds" in view in Fig. 1;

In Fig. 2, in section along the line A—A of Fig. 1.

In said Figs., 1 designates a rectangular cutting of white plastic, whereon the three diamonds are printed at 2.

[Price 2/8d.]

Said cutting is applied and fixed with its non-printed face onto the cutting 3 of 25 coloured opaque plastic material having the same dimensions of the former.

In this way, playing-cards are obtained, which as compared with the conventional cardboard playing-cards present the advantage of offering higher resistance against wear and tear and the advantage of being suitable to be washed.

What I claim is:—

Playing-cards, characterized in that they are constituted of white plastic material, printed on one face, and fixed with the other onto a support of coloured opaque plastic material.

Dated this 25th day of March, 1950.
